

INTERVIEW PREPARATION

I. MAIN GOALS OF THE INTERVIEW

To present your knowledge & experience and give a full image of your technical profile of high importance is to

be able to introduce yourself briefly and describe in detail the projects you have worked on

To show your interest and motivation to further develop your skills

II. STANDARD INTERVIEW STRUCTURE

1. Introduction by the client (usually 3-5 minutes)

3. Questions related to your technical profile, like:

Please tell me more about the last project you have worked on? Or the one you have described in your resume.

Have you worked with similar

technologies? If no, do you know anything about it? What is it?

Why

would benefit our project?

Which is the project from which you have learnt the most?

Have you worked in distributed teams / with international customers?

What is the structure of the solution, what architecture (backend) did you follow?

What kind of methodologies and processes did you use?

Code refactoring what was refactored and how was it refactored?

What can you tell me about code complexity? How would you reduce it?
